

Water Worlds

Now you have looked at the different bodies of water on the planet, the next thing we are going to do is focus on rivers.

Find out where some of the most famous rivers in the world are located by completing the map below.

Once you have completed your map, choose one of the rivers and make a poster about that particular river.

Include;

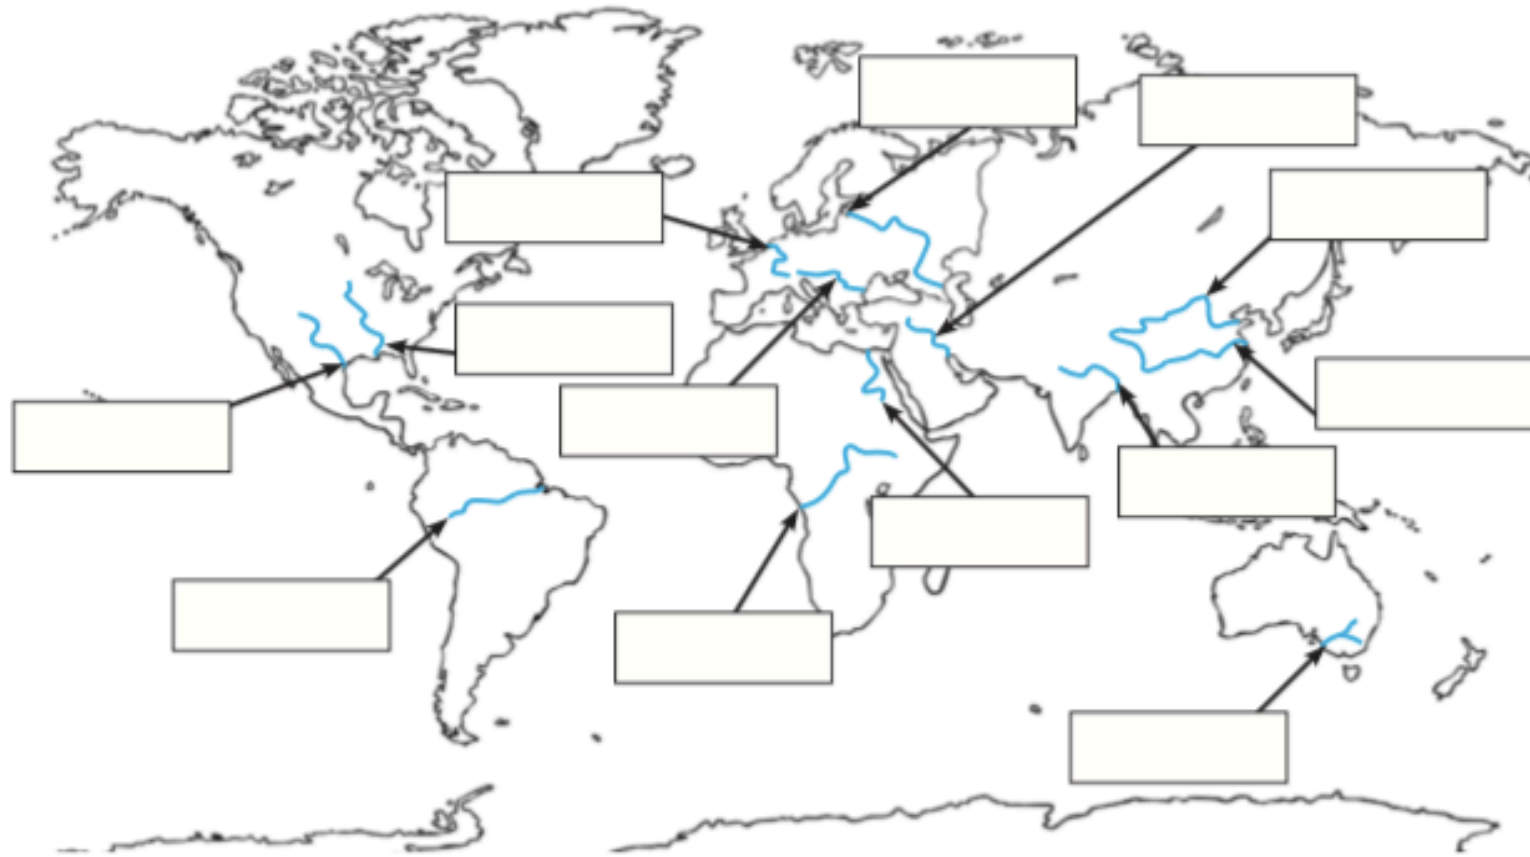

- Where the river starts(source) and ends (mouth)
- How long the river is
- Any interesting facts and information associated with that particular river .

This should just be a side of A4 . Think about the way you arrange information on the page with pictures and subheadings etc . Remember all the things we have said in class about presentation.

When researching remember to put the river name that you have chosen and for kids into Google so that you get age appropriate content.

World Map Rivers

Find and draw the rivers of the world and then label them using the labels at the bottom of the sheet.
